New Features

Graphs has been extended to support Access databases and to use dates on the x axe. Here it's used to show water level measurements, but can also show chemistry etc. Use "add data wizard" to import graphs from an Access database.

Improvements

- Water level theme now supports layers where they pinch out. Furthermore, better support for where clause SQL has been implemented.
- Geophysics from GERDA can now be fitted to terrain.

Bug fixes

- A bug in the "add map layer wizard" filter has been fixed.
- Zoom to default now works when auto interpolation is on.
